

### Our Team

The different tests are carried out by our clinical team composed of doctors, neuropsychologists and nurses from the Centre Hospitalier de Luxembourg and the Luxembourg Institute of Health. They will support you throughout the study and are happy to answer all your questions.

Our clinical team is active at different locations in Luxembourg and surrounding. You can visit them for example in Leudelange, Ettelbrück, Clervaux, Wasserbillig or Esch-sur-Alzette as well as other cities in the Greater Region.

In addition, the team is in regular contact with patient associations, doctors and researchers in Luxembourg as well as with our international partner sites in Tübingen, Kassel (Germany) and Oxford (UK).

Your information and samples will of course be treated with high confidentiality. Your personal information will be visible only to the clinical team but not to the researchers. Your participation is non-binding and can be terminated at any moment without consequences.

### Contact

Our clinical team is available for questions about the study or to arrange an appointment for your participation. You can reach us by telephone or any time via email.

**email:** [parkinson@chl.lu](mailto:parkinson@chl.lu)

**phone:** (+352) 44 11 - 48 48

You can find further information on Parkinson's disease, our research and the study programme on our website:

**[www.parkinson.lu](http://www.parkinson.lu)**

We are looking forward to your visit!

### Donations

If you would like to support the Luxembourg Parkinson's Study with a donation to:

**Name:** Université du Luxembourg

**Bank:** BCEE

**IBAN:** LU19 0019 2955 5270 5000

**BIC:** BCEEULL

**Subject:** Parkinson Research LCSB (Dr. Krueger)

**The National Centre of Excellence in Research on Parkinson's disease** has set itself the aim of finding new ways for an earlier diagnosis and better treatment against Parkinson's disease. For this reason, people with and without Parkinson's are invited to participate in our study. You too can help!

**Why research on Parkinson's disease?**

Parkinson's disease is the most common neurodegenerative movement disorder, for which there is currently no cure. New research approaches are needed to decipher the exact causes of the disease and thereby find new ways for an earlier diagnosis, better treatment options and even preventive measures.

**Parkinson's disease research in Luxembourg**

Four Luxembourgish research institutions have set themselves the goal to significantly contribute to these points. The experts of these institutions have joined forces in a research programme entitled National Centre of Excellence in Research on Parkinson's disease (NCER-PD) that is funded by the Luxembourg National Research Fund (FNR).

Our researchers combine the large number of clinical assessments and biological information from the laboratory with computer-driven methods. This allows them to search for new patterns, so-called biomarkers, through which healthy people and people with Parkinson's or even subgroups of the disease can be differentiated. Based on these patterns new treatment and diagnostic approaches can then be developed.

**Your participation in the Luxembourg Parkinson's study**

People with and without Parkinson's disease are invited to participate in the Luxembourg Parkinson's study. You can determine your level of participation and which tests you would like to take part in.

The programme includes:

- Clinical examinations by a doctor
- Neuropsychological tests e.g. smell, dexterity, concentration and memory
- Laboratory analyses from blood, urine and saliva samples

There is also an opportunity to take part in additional tests.
